Music Stands for Grand Pianos
Notenpulte für Flügel
大鋼琴的音樂立場

PRESS RELEASE

Fit on piano with PIANOFIT®: music stand for grand piano moves notes closer to the keys

The music stand of a grand piano is positioned significantly higher than that of a piano. For many musicians, the distance between the musical text and keys seems too far. This complicates the pianistic implementation of the musical text, turning the page and can lead to bad posture. Not only amateurs, but also professionals see a need for correction here. The patented PIANOFIT® PREMIUM solves these problems in an elegant way.

A new, improved mechanism ensures easy handling, as the music stand can be adjusted from the folded state by simply pulling it out in height and angle. Once positioned, it is also locked and can also be loaded with heavier music volumes.

Pianists, piano educators and piano accompanists are addressed as users at the professional level, but also music schools, universities and music theater. On a private level, the purchase is particularly worthwhile for children and families, whose grand pianos are used by several generations. The desk can be used both on the closed wing and with the lid open.

The dimensions of PIANOFIT® PREMIUM are 62x40x11cm, it weighs around 6kg. The desk in acrylic glass, stainless steel and brass costs € 599 plus VAT/shipping costs in our web shop. The wooden model painted in high gloss black costs € 899 plus VAT/shipping costs. All RAL colors possible on demand.

PIANOFIT® products are manufactured exclusively in Germany, including the DUO model, which has a larger width but is not height adjustable. The dimensions are 80x32x7cm. DUO is also made of acrylic glass. It costs € 399 plus VAT/shipping costs. Wooden versions on demand.

On request, we can also manufacture the desks in wood, painted black. Prices for this on request. There are matching wool felt bags for protection and transport for both models. They cost € 249 or € 199 including VAT.
